

WINDOWS SEARCH FEATURE

In addition to files and folders, you can search for web results and apps. When you first click in the search box you will see five tabs along the top of the dialog box that lets you choose what to search for. If you don't click one of these, the search function is smart enough to return "all" results.

If you need to search for anything on your Windows 10 PC, the taskbar search bar is the place to do it. You can still hit the Start button (or Start key on your keyboard) and start typing if you used to do that to search in previous versions of Windows.

SEARCH SETTINGS AND TOOLS

Safe search

Sometimes web search results may show content that is not suitable for a younger audience. To select the search filter that is appropriate for you go to Settings > Cortana > Permissions and History and select a filter under SafeSearch.

Search history

Search History can help to provide better search results. It can be turned off, just like the Device History. Go to Settings > Permissions and History and use the toggle to turn it off. If you click Search History Settings a browser window opens showing the history.

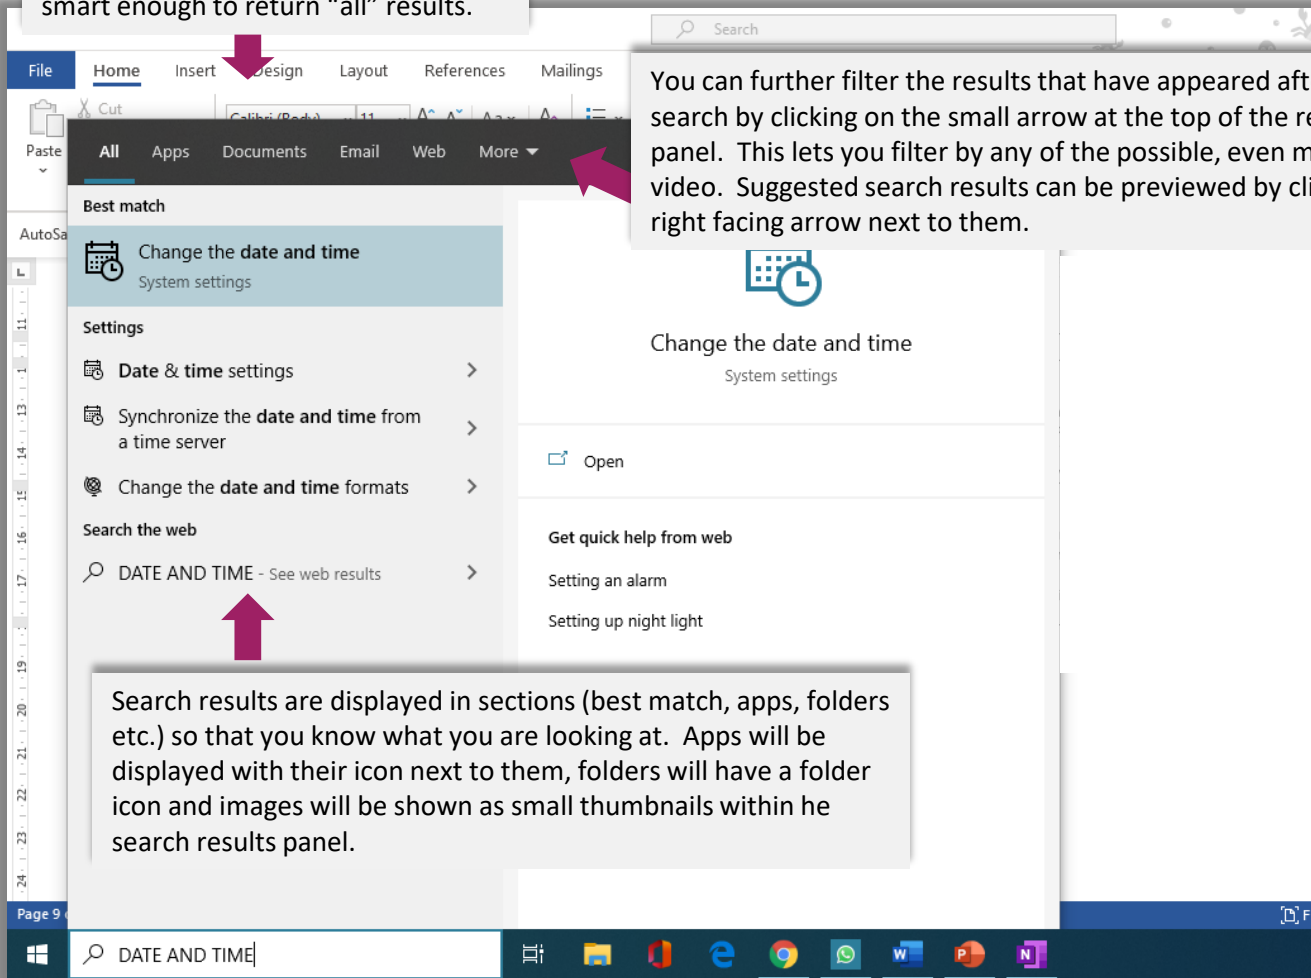

Cloud Search

Cloud search allows you to suppress cloud content on search results. Under Cloud Search, there is a toggle "Windows Cloud Search". This option manages whether Cortana shows cloud content in a Windows Search.

Device History

This setting allows for improvement of on-device search results, whether you are using an app, settings or another search from any signed-on device. If you prefer that Windows does not record on-device search history, you can switch this option off in Settings > Permissions and History

You can further filter the results that have appeared after you search by clicking on the small arrow at the top of the results panel. This lets you filter by any of the possible, even music or video. Suggested search results can be previewed by clicking the right facing arrow next to them.

Search results are displayed in sections (best match, apps, folders etc.) so that you know what you are looking at. Apps will be displayed with their icon next to them, folders will have a folder icon and images will be shown as small thumbnails within the search results panel.
